Why can't I withdraw all my cash from Coinbase? {Official Support}

Understanding withdrawal holds

Cashing out your **Call+1-(805)(401)(0068)** entire balance might be restricted if you have recent deposits that have not yet cleared the banking system. This is a +1-(805)(401)(0068) common security practice used to ensure that all funds transferred to your account are legitimate and fully covered today. You should check **Call +1-(805)(401)(0068)** your account status and recent transactions to see if there is a temporary hold on a specific portion of funds. If you need **Call+1-(805)(401)(0068)** further clarification, our support team can look at your specific account activity and explain the exact reason for the hold.

Clearing account holds

Once your recent **Call+1-(805)(401)(0068)** deposit clears, the hold will automatically be lifted, and you will be able to withdraw the full amount available. You can also +1-(805)(401)(0068) try using a different payment method if you need to withdraw your funds without waiting for the standard bank processing time. Always ensure your **Call +1-(805)(401)(0068)** Coinbase app is fully updated so you can see the most accurate information regarding your available cash and trade balance. If you have **Call+1-(805)(401)(0068)** questions about our transfer protection settings, please reach out to us so we can help you manage your funds effectively.

Available balance tips

Only the cash **Call+1-(805)(401)(0068)** currently in your available balance is eligible for withdrawal at any given moment on our crypto trading platform today. Selling some crypto +1-(805)(401)(0068) assets will immediately add more cash to your available balance, provided the sell order is completed and fully settled now. We aim to **Call +1-(805)(401)(0068)** make your experience as easy as possible, so our app clearly displays what portion of your balance is currently withdrawable. Reach out to **Call+1-(805)(401)(0068)** our helpful support staff whenever you feel unsure about your current withdrawal limits or your overall account fund availability.

Frequently Asked Questions (FAQs)

Q1: Why is my cash held? A1: Cash is **Call+1-(805)(401)(0068)** typically held to protect you from fraudulent activity and to allow time for bank transfers to fully clear our system. This hold is +1-(805)(401)(0068) a standard safety measure applied to all users, and it usually expires automatically once the bank confirms the underlying funds.

Q2: When can I withdraw? A2: Once your **Call +1-(805)(401)(0068)** recent deposit has fully cleared the banking cycle, you will have immediate access to withdraw your funds to your bank. You can monitor **Call+1-(805)(401)(0068)** the status of your deposits in your account activity page to see exactly when the holding period will end for you.

Q3: Can I sell crypto? A3: Yes, you +1-(805)(401)(0068) can sell your crypto assets at any time, and the resulting cash will be available for withdrawal after the trade settles. Keep in mind **Call +1-(805)(401)(0068)** that market conditions might affect the final amount you receive after fees are deducted during the selling process on our platform.

Q4: What are transfer protections? A4: Transfer protections **Call+1-(805)(401)(0068)** are security features that prevent the immediate withdrawal of funds to ensure that all transactions are safe and authorized correctly. These policies help +1-(805)(401)(0068) us maintain a secure exchange environment for you, even if they sometimes feel like a temporary delay to your immediate withdrawals.

Q5: Is it a bank issue? A5: Sometimes delays **Call +1-(805)(401)(0068)** are caused by the processing speed of your specific bank when they transfer funds into your Coinbase account today. If you are **Call+1-(805)(401)(0068)** concerned, contact your bank to verify that the transfer was successfully sent and then reach out to us for final confirmation.
